### AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A composition capable of being crosslinked to form a pressure sensitive adhesive having a network structure, said composition comprising (A) a polyoxyalkylene polymer having at least one alkenyl group in one molecule, (B) a compound having 1 to 3 hydrosilyl groups on average in one molecule and (C) a hydrosilylation catalyst as essential components.

2. (Previously Presented) The composition of claim 1, wherein said compound (B) has a structural formula represented by the following formula (I):

( $1 \leq m \leq 3$ ,  $1 \leq n \leq 8$ ).

3. (Previously Presented) The composition of claim 1, wherein said compound (B) has 1.8 - 2.8 hydrosilyl groups on average in one molecule and a number average molecular weight of 400 - 3000.

4. (Previously Presented) The composition of claim 1, wherein [amount of hydrosilyl group in said compound (B)]/[total amount of alkenyl group in component (A)] is 0.4 - 0.8.

5. (Previously Presented) The composition of claim 1, wherein the polyoxyalkylene polymer having an alkenyl group for said (A) has a number average molecular weight of 6,000 - 50,000.

6. (Previously Presented) The composition of claim 1, wherein the polyoxyalkylene polymer for said (A) has 1 - 2 alkenyl groups on average in one molecule.
